### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 2, and 6-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Schluter (3975128).

Schluter teaches a mold valve chamber (20) having an output port (17) on the first axis (Fig. 1) with a mold valve piston (16) and air introduction system (25,34), an injection chamber (1) on a second axis (Fig. 1), an injection piston (3) that is movable in the injection chamber (A), and defines a portion of the mold valve chamber inner perimeter (Figures 2 through 4).

# Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

Application/Control Number: 10/781,411 Page 3

Art Unit: 1722

1. Determining the scope and contents of the prior art.

- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. Claims 3-5, 10, and 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schluter (3975128) in view of Takizawa et al (5770245).

Schluter fails to teach the piston configuration.

Takizawa teaches a piston (32) having seal rings (31). These are equivalent to the nonmetallic portion being between metallic portions, either from one portion or two separate portions. The seal ring will provide an 'interference fit' within the inner perimeter of the chamber.

It would have been obvious one of ordinary skill in the art to modify Schluter with the nonmetallic portion between two metallic portions as taught by Takizawa because it provides a seal for the valve within the chamber.

In regards to claims 10, 15, and 17, the claims do not teach a structural limitation and merely states the air injection system communicating in response to a position of a mold valve piston. The limitation provided is akin to a process of using the apparatus in response to a condition and provides no structural limitation.

In regards to 4 and 5, Schluter shows a mold valve piston in the extended position (Fig. 1), the passage of the air inlet is blocked by the mold valve piston.

Thereby, Schluter teaches a mold valve piston that is selectively movable to block the air inlet.

Application/Control Number: 10/781,411 Page 4

Art Unit: 1722

## Response to Arguments

6. Applicant's arguments with respect to claims 1-10 and 15-17 have been considered but are moot in view of the new ground(s) of rejection. Examiner was recently made aware of the Schluter reference that teaches the claimed invention with the mold valve chamber and injection chamber and clearly showing an air injection system via the blower (25) that is connected to the mold valve chamber. Claim 4 does not provide distinction in the valve being selectively movable to block the air inlet over Schluter.

In regards to arguments concerning the use of Takizawa, Examiner disagrees with the applicant's arguments since the seal rings can provide an improved fit of the piston with the chamber. This will prevent any material from flowing back especially in the case of wear or due to deformities of the either parts either from manufacturing or from the course of operation. It would be obvious to one of ordinary skill in the art to incorporate this feature into Schluter for the mold valve chamber.

#### Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bellasalma (6997690).
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Emmanuel S. Luk whose telephone number is (571)
